

# Proximus NXT Visual Identity

# **Brand architecture**

## Brand architecture

### Context

## Context

Proximus will simplify its brand architecture from an inside out perspective, to an outside in perspective. Instead of focussing on own segmentation (business, enterprise), we'll focus on the needs of the client: do they need mostly Telco or do they need ICT?

As a result, the Proximus Business and Proximus Enterprise logo disappear and will be replaced by Proximus and Proximus next. It's important to note that both brands still fall under the Think possible umbrella!

### Current brand architecture

### New brand architecture

**Mission / Credo /  
Baseline**

## Mission / Credo / Baseline

This change is not just a change of a symbol, but a symbol of change in the complete organisation.

Website, products, partners, ... will all be repositioned to serve the new mission.

## Mission / Credo / Baseline

### Mission

**Never used externally, only internally,  
for indoctrination purposes**

We co-create opportunities and enable you to grow in a secure and sustainable manner. As a result of our unique expertise in next-gen IT services and advanced connectivity, you can achieve your ambitions and realize your vision.

Our talented employees are eager to help you to realize your full digital potential. Together we implement sovereign and trusted solutions that make people work smarter and live better.

## Mission / Credo / Baseline

### How to write Proximus NXT in plain text?

In plain continuous text we write Proximus NXT like this, with a capital P, N, X and T.

Proximus with P, like it always is in plain text, being the main brand name. Then adding NXT in capitals to avoid that people would simply overlook it.

Proximus is a very strong brand, so writing Proximus nxt would not make the NXT stand out enough.

## Mission / Credo / Baseline

### Credo

**“Inspired by tech, driven by people.”**

The credo can be used as headline in launch comm.

The layout can be in several lines. In this case, use the light font for the first part and the bold font for the second.

Headline leading is equal to typesize. Eg. 100/100pt

## Mission / Credo / Baseline

### Baseline

Used as second line under the logo.

**“tech. bizz. people.”**

Generic: sometimes the context is general (a booth at a conference) and we cannot put a specific contextual second line. For this we need a generic second line. We call it the baseline.

The current baseline is a short recap of the credo.

## Mission / Credo / Baseline

### Baseline

When NOT to use a second line

In a generic situation where we already have the credo nearby. In that case, the baseline is redundant.

**Logo**

## Logo

### Vertical logo / Full colour

The full colour logo is the primary version and should be used in all enterprise communications where possible.

**Always prioritize** the vertical version over the horizontal one.

## Logo

### Horizontal logo / Full colour

The full colour logo is the primary version and should be used in all enterprise communications where possible.

**Always prioritize** the vertical version over the horizontal one.

## Logo

### Vertical logo / Greyscale

Only use the greyscale versions if colour reproduction is not possible.

**Always prioritize** the vertical version over the horizontal one.

## Logo

### Horizontal logo / Greyscale

Only use the greyscale versions if colour reproduction is not possible.

**Always prioritize** the vertical version over the horizontal one.

## Logo

### Horizontal logo / Greyscale

Only use the greyscale versions if colour reproduction is not possible.

**Always prioritize** the vertical version over the horizontal one.

## Logo

### Horizontal logo / Greyscale

Only use the greyscale versions if colour reproduction is not possible.

**Always prioritize** the vertical version over the horizontal one.

## Logo

### Stencil

Only use the stencil logo if any of the other versions cannot be reproduced (only for embroidery or engraving).

**Always prioritize** the vertical version over the horizontal one.

## Logo

### Minimal size

Only use the stencil logo if any of the other versions cannot be reproduced (only for embroidery or engraving).

**Always prioritize** the vertical version over the horizontal one.

7 mm  
40 px

Print: 11 mm (Height)  
Digital: 30 px (Height)

12 mm  
70 px

Print: 12 mm (Height)  
Digital: 70 px (Height)

## Logo

### Second line / Baseline

Sometimes the context is general (ex. a booth at a conference) and we cannot put a specific contextual second line. For this we need a generic second line.

We call it the baseline.

The current baseline is a short recap of the credo:

**Tech. Bizz. People.**

These guidelines are based on a **300 px** height of the logo.

## Logo

### Second line / Contextual

You can adapt the second line to the context of the communication. When you have an advertising, banner, ... that talks about a specific ICT domain OR vertical, you can add that in the second line.

**proximus NXT**  
cybersecurity

**proximus NXT**  
hybrid work

**proximus NXT**  
health

## Logo

### Second line / Contextual

To maintain proper proportions when creating a new second line, keep these guidelines in mind. These are based on a **300 px** height of the logo.

## Logo

## Second line

Contextual

Generic

## Logo

### Please do not ...

✘ Do not change the position of the logo elements

✘ Do not change the font of the baseline

✘ Do not change the composition of the logo

✘ Do not change the colours of the logo elements

✘ Do not add effects to the logo

✘ Do not change the proportion of the logo elements

## Logo

**W.I.P.**

**Colours**

## Colours

## Ratio

The recognisable Proximus purple is prominent in the layouts

The black is mainly present in the gradients that add a touch of personality.

White adds freshness, mainly by applying it in headlines.

## Colours

### Ratio

#### Visual example of a communication with the good ratio

On a photographic background it will almost never be possible to have a 50% purple presence. As most photograph based compositions throughout this document show, purple tends to become underrepresented. This is not considered a problem as the purple overlays and light effects remain strong identifiers for the brand even without the perfect color ratios.

## Colours

### Primary colours

**Purple** is our brand identifier and should always be clearly visible in all our communications.

**White** adds freshness, mainly by applying it in headlines. In some lighter layouts it can be a canvas colour.

**Black** is a canvas too. It enables our colours to stand out. Can be used for black based identities (Pickx, Epic..).

Follow the Proximus colour codes as closely as possible – whichever medium you're working on. The specific materials and methods used in different projects will affect the final colour reproduction. The result can differ due to:

- grades of paper and plastic
- printing and manufacturing processes
- lighting conditions

In these situations colour values may need to be manually adjusted to match the PANTONE® values as closely as possible.

RAL colours are used primarily for signage systems.

Opacity: Colours can be used from 10 to 100% with 10% increments.

Purple  
#5C2D91  
RGB (92, 45, 145)  
CMYK (80, 100, 0, 0)  
RAL (320, 40, 40)  
Pantone 268 C

Transparencies are shown here as they would appear on a white background

White  
#FFFFFF  
RGB (255, 255, 255)  
CMYK (0, 0, 0, 0)

Transparencies are shown here as they would appear on a purple background

Black  
#000000  
RGB (0, 0, 0)  
CMYK (75, 68, 67, 90)

Transparencies are shown here as they would appear on a white background

## Colours

### Secondary colours

Secondary colours can further enrich our communications. They play a supporting role and can help where additional colours are required.

The magenta and turquoise, from our secondary colour palette, stand out when used in combination with the purple, and at the same time they match well. For example, they can be used to add highlights to texts.

Grey can be used on a functional level. E.g. to create light content areas.

They can never be used standalone, but always in combination with the primary purple.

Tints allow for flexibility within our system.

They can be used to complement secondary colours in information graphics, for example.

All permitted tints and colour breakdowns are shown here.

Colours can be used from 10 to 100% opacity with 10% increments.

**Magenta**  
**#FF418C**  
RGB (255, 65, 140)  
CMYK (0, 80, 0, 0)  
RAL (4003)  
Pantone 7424 C

**Turquoise**  
**#66D2CC**  
RGB (102, 210, 204)  
CMYK (55, 0, 25, 0)  
RAL (6027)  
Pantone 325 C

**Grey**  
**#C1C1C3**  
RGB (193, 193, 195)  
CMYK (5, 0, 0, 30)  
RAL (7047)  
Pantone CoolGrey 4 C

## Colours

## Gradients

Radial gradient

Linear gradient

## Colours

### Gradient settings

#### Radial gradients

When applying radial gradients, keep in mind these settings.  
Always pull the gradient tool from corner to corner.  
Make sure the position of the slider is set at 40%, starting from purple.

## Colours

### Gradient settings

#### Linear gradients

When applying linear gradients, keep in mind these settings.  
Always pull the gradient tool from edge to the opposing edge.  
Make sure the position of the slider is set at 40%, starting from purple.

## Colours

### Wrong applications of the gradients

✘ The gradient is not smooth, and the black is too prominent.

✘ The gradient is not smooth, and the purple is too prominent.

✘ The gradient doesn't start in the corner.

✘ The gradient doesn't end in the corner

## Colours

### Editorial colour use

White will be a very dominant background colour in certain cases, in e.g. inside pages of magazines on web pages.

## Typography

### Main fonts

light

regular

bold

extrabold

Our bespoke typeface is distinctive and contemporary yet simple and not too stylized, which means it will be able to stand the test of time.

It expresses our personality and is key to the visual style in which we convey our messages.

To ensure clarity, avoid typesetting with hyphenation, irregular word spacing (e.g. justified text) and an overly fussy punctuation style.

## Typography

**Visual language**

## Visual language

## Usage percentages

Simple layouts without pronounced branded elements. The colour gradient is often present, and headlines in the Proximus font also add recognisability.

NXT based layouts

X based layouts

## Visual language

### Layouts without shapes

When we want to create quieter layouts without using NXT's graphic elements, the black-purple gradient is an important asset. This is used as a background on which we can place cutout photos. We can also create typographic layouts by using large headlines on top of the gradient, or images.

**For proper gradient usage, be sure to check out the 'Colours' chapter.**

## Visual language

### Layouts with shapes

#### **NXT based layouts**

The three NXT letters are used to build layouts

#### **X based layouts**

Since the X is the most distinctive letter, we can use it on itself to create compositions

## Visual language

### NXT based layouts

The letters can be placed in the frame in various ways.

## Visual language

### NXT based layouts

1. Place the NXT letters in the canvas.

2. Add a gradient background, and make sure the NXT letters are Proximus purple.

3. Apply the overlay on top of the layout (see next page).

## Visual language

### NXT based layouts

Guidelines to recreate the overlay effect.

1. **Screen (RGB) / Print (CMYK)**  
Expand the inner corner of the X. Make sure it is a white solid shape.

2. **Screen (RGB) / Print (CMYK)**  
Go to 'Effects > Overlay'

3. **Screen (RGB) / Print (CMYK)**  
Apply a 'Gradient feather' on the shape, from the inner corner of the X to the edge of the canvas.

4. **Screen (RGB)**  
Duplicate the layer, paste it on top. Put the transparency at 40%.  
**Print (CMYK)**  
Duplicate the layer, paste it on top. Put the transparency at 40%.

## Visual language

### NXT based layouts

In combination with photography

We can put photography  
inside the NXT letters

Or put the NXT letters on top  
of photography

## Visual language

### NXT based layouts

#### In combination with photography

These kind of layouts require different overlay settings to achieve the best result. The settings may vary a little depending on the photo used. The percentages can be adjusted so that a similar effect is achieved throughout the different layouts.

1. **Screen (RGB) / Print (CMYK)**  
Expand the inner corner of the X. Make sure it is a white solid shape. The photographic layers is in the front.

2. **Screen (RGB) / Print (CMYK)**  
Go to 'Effects > Overlay'. The opacity is 100%. Apply a 'Gradient feather', from the inner corner of the X to the edge of the canvas.

3. **Screen (RGB) / Print (CMYK)**  
Duplicate the layer, and make it a solid purple shape. Make sure this shape is put on top.

4. **Screen (RGB) / Print (CMYK)**  
Change the opacity of the purple layer to 50%.

## Visual language

### NXT based layouts

#### In combination with photography

These kind of layouts require different overlay settings to achieve the best result. The settings may vary a little depending on the photo used. The percentages can be adjusted so that a similar effect is achieved throughout the different layouts.

1. **Screen (RGB) / Print (CMYK)**  
Expand the inner corner of the X. Make sure it is a white solid shape. The photographic layers is in the front.

2. **Screen (RGB) / Print (CMYK)**  
Go to 'Effects > Overlay'. The opacity is 100%. Apply a 'Gradient feather', from the inner corner of the X to the edge of the canvas.

3. **Screen (RGB) / Print (CMYK)**  
Duplicate the layer, and make it a solid purple shape. Make sure this shape is put on top.

4. **Screen (RGB) / Print (CMYK)**  
Change the opacity of the purple layer to 50%.

## Visual language

### X based layouts

In X-based layouts, we can also distinguish between layouts without ...

... and with photography.

## Visual language

### X based layouts

The X shape can be placed freely into the artboard.  
This kind of layout works best in a horizontal frame.

## Visual language

### X based layouts

The right part of the X is filled with a gradient.

The black part starts at the inner corner of the left part of the X, and the purple part ends at the corners of the right part of the X.

The left part of the X is always filled with Proximus purple.

**These gradient settings are only used in X based layouts.**

## Visual language

### X based layouts

❌ Do not add additional colours to the layouts

❌ Make sure there are no weird gaps between NXT and the edges of the canvas.

❌ Do not change the order of the letters.

❌ Don't zoom in too much on the details. That way the shapes are unrecognisable.

**Icons**

## Icons

### Main icons

For Proximus NXT, we use the same icons as Proximus. These can be downloaded via the brand portal, or contact the branding team.

Do not add a gradient fill to these icons.

**Photography**

## Photography

### Style

The photographic style is the same as that of Proximus. Please head to the brand portal, under the 'Photography' section, or contact the branding team.

## Photography

### Examples

Display images that show the subjects or situations linked to Proximus NXT activities, with a preference for realistic contexts.

✘ Avoid images that portray cliché ideas, as well as over-edited photos.

**Design system**

## Design system

Here you find guidance to help you translate our brand to digital platforms. Several options are proposed. Make your pick based on context and UX best practices.

The Proximus design system for website and app experiences consists of working code, design tools and resources, human interface guidelines, and a vibrant community of contributors.

More detailed guidelines and best practices are available

on <https://designsystem.proximus.com>.

Interfaces evolve quickly. Please verify on <https://designsystem.proximus.com> if you are using the latest versions.

More information: <https://wap.proximus.com/groups/proximus-design-system>

# Grid system

## Grid system

All Proximus publications use a basic 3-column grid which is originally derived from our symbol.

For practical reasons, we can split it further into 6 or 9 columns which provides more flexibility when positioning and aligning images, text and other graphic elements.

### Print grid system introduction

## Grid system

Use a 9-column grid for most portrait and landscape formats. For narrow formats like DL or small applications like the SIM Card, 6-column grids work better.

### Column grids

#### 9 column grid

For standard formats

#### 6 column grid (alternative grid)

For standard formats

## Grid system

As a general rule, the logo is equal to 2 columns on a portrait format and 1 + 1/4 -column on a landscape format.

On formats which are further away from the standard A-format, it might be necessary to adjust the size so it feels in line with other materials.

When the logo is used with the baseline, the logo moves up so the baseline sits on the margin as shown. See page 31 for guidance on when to use the logo with baseline.

### Exception

A phone packaging example is shown opposite where we've adjusted the logo size to 2.5 columns wide, as the format is almost square.

## Logo size and position

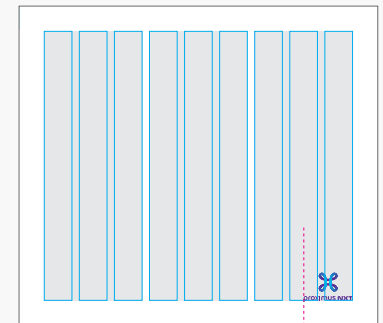

Portrait format  
Logo: Two columns wide

Logo with baseline  
Logo moves up and baseline sits on margin

Landscape format  
Logo: One column + 1/4 wide

Exception for almost square format  
Logo: 1.5-columns wide

# Grid system

## Generic grid

### 12 column grid

For web pages and mobile apps

We use a 12 columns system with gutters of 2rem.

Max width is 120rem (equivalent to 1200px at the 1200 px breakpoint).

■ = gutters

## Grid system

The two first examples show the position of the symbol on the TV interface and on web pages. In those cases it's always placed in the top left corner.

On other digital media, such as banners, custom campaign landing pages and apps, the symbol or the logo can be placed in **any corner** of the screen.

The relative size of the logo in these examples is not fixed.

## Logo position

TV interface and desktop website (symbol only)

Mobile website (symbol only)

Other (with a symbol only)

Other (with a full logo)

Dag mevrouwBriot

De digitalisering biedt bedrijven volop kansen. De keerzijde ervan? De toenemende kwetsbaarheid op vlak van cybersecurity. Bedrijven doen hun uiterste best om hun cybersecuritystrategie up to date te houden. Het blijft helaas een strijd tegen cybercriminelen die steeds beter georganiseerd zijn en gebruikmaken van de laatste nieuwe technologieën.

Dankzij de versleutelde public clouds en een doorgedreven identity management maakt u het cybercriminelen extra moeilijk. Geen idee waar u nu best de prioriteiten legt? Samen met de experts van Microsoft, Palo Alto Networks, Fortinet, TrendMicro en Cisco heb ik de belangrijkste trends en bedreigingen voor 2023 in kaart gebracht.

Veel leesgenot.

**Wouter Vandebussche**  
Security-expert, Proximus

### Gevoelige data veilig in de public cloud

De zogenaamde sovereign cloud is de veiligste optie om gevoelige en vertrouwelijke informatie te bewaren in de cloud. Maar u geniet dan niet van de flexibiliteit van de public cloud. Of toch?

[Ontdek het hier](#)

### 13 trends & threats in cybersecurity

Van multicloudsecurity tot cybercrime-as-a-Service, wipers, NIS2 en social engineering: deze lijst van trends & threats in cybersecurity helpt uw bedrijf in 2023 de juiste focus te leggen.

[De 13 trends van 2023](#)

### Gaat ICT door een woelige periode?

# Applications

The screenshot shows the Proximus NXT website header with navigation links: Plaats, Telefonie, Netwerken, ICT, Hulp, News, and sub-links for ICT-uitdagingen, Starten, News, and ISO-certificaten. A search bar and 'MyProximus' button are also visible. The main content area features a webinar announcement with a purple and white graphic. The text reads: 'Webinar: hoe winkelbeleving naar een hoger niveau tillen?' published on 17/02/2023. The webinar is on February 16th, focusing on Electronic Shelf Labels (ESL) and Smart Retail Analytics. A 'Bekijk nu' button is present. On the right, a 'Ook voor u' section lists related topics: 'Hoe garandeert u kwalitatief transport van diepvriesveding', 'Zijn de huidige toestellen klaar voor 5G?', and 'Is geen wachtwoord veiliger dan een complex wachtwoord?'. Social media sharing icons for Facebook, Twitter, and LinkedIn are at the bottom right.

## Webinar: hoe winkelbeleving naar een hoger niveau tillen?

Gepubliceerd op 17/02/2023 in Webinars

Webinar  
Op aanvraag  
Bekijk nu

**De Electronic Shelf Labels en de Smart Retail Analytics bieden vele mogelijkheden**  
Op 16 februari organiseren we een retail webinar waarin SparIT de werking en de vele mogelijkheden belicht van Smart Labels en Smart Analytics.

Danten zijn steeds meer op zoek naar meerwaarde wanneer ze naar de winkel gaan. Correcte prijzen zijn uiteraard een evidentie, maar er is meer.

Met Electronic Shelf Labels (ESL) zijn heel wat toepassingen mogelijk. Dynamische prijzen kunnen de afvalberg weklainen door op het einde van de dag de prijs van versproducten te laten dalen. Promoties kunnen aangeduid

Ook voor u

- Hoe garandeert u kwalitatief transport van diepvriesveding
- Zijn de huidige toestellen klaar voor 5G?
- Is geen wachtwoord veiliger dan een complex wachtwoord?

Delen:

- Facebook
- Twitter
- LinkedIn

## Applications

At Proximus, the workplace is a constantly evolving concept, but the past two years have seen exceptional change. **“Covid encouraged us to take bigger steps faster, and to reinvent the workplace.”**

With its Campus program, Proximus is completely redesigning the workplace. “Our approach is based on three pillars,” says Margaret Denis, Director Workspace Transformation at Proximus. “First and foremost, employees have the ability to choose where, when, and how they work.” This allows us to work in a way that not only matches the content of the job, but also the employee’s personality and personal circumstances. “The second pillar is that of human connection. Creativity happens when people meet.”

Environmental and social impact together form the third pillar of the program. “We are resolutely choosing a new and different use of our office buildings,” Margaret explains. “An office that’s virtually empty on Fridays because everyone chooses to work from home that day? That is not what we want.” The Proximus towers in Brussels are the showcase for co-creation, an essential element of the Campus program. “The towers are growing into our inspiring, digital campus in Brussels, as well as forming a fluid ecosystem of workplaces with our regional offices, employees’ home offices, and workplaces at partners and customers.”

has 25 years of experience at Proximus and has been Director of Workspace Transformation since 2021.

### Co-creation with both customers and partners

At its core, the Campus program is designed to create a new, flexible ecosystem. “It is crucial that employees feel good,” says Margaret. “The physical workplace – the building – shapes itself around the employee, not the other way around.” For example, co-creation is very important to us, not only between our various departments but also with customers and partners. That is why we are invested in an agile way of working together.”

For other types of work, employees will be able to go to the headquarters in Brussels, but we also encourage them to use regional offices more. “We focus more on individual work there, but always within an environment where you can easily connect and collaborate with colleagues or partners.” There, too, the buildings will be redesigned to meet the needs of the different types of activities. “The choice of workplaces is in continuous development in co-creation with our employees based on seven different profiles. These profiles are based on some typical aspects of work: number of interactions, complexity of those interactions, profiles inside the team or outside, mobility in a building or outside, etc.”

“The physical workplace – the building – shapes itself around the employee, not the other way around.”

Director Workspace Transformation

## Applications

The screenshot displays the Proximus NXT website interface. At the top, a dark purple navigation bar contains the Proximus NXT logo (a stylized four-petaled flower) and the tagline 'tech. bizz. people.' on the left. To the right of the logo are navigation links: 'Packs', 'Telefonie', 'Netwerken', 'ICT', 'News', and 'Hulp'. Below the navigation bar is a large hero section with a purple background and a photograph of a woman in a white shirt. The main headline reads 'NXT Pack Together' in large white text, followed by the sub-headline 'Het pack aangepast aan uw KMO'. A white button with the text 'Ik ontdek' is positioned below the sub-headline. A white horizontal bar with rounded corners spans the width of the page, containing the text 'Bent u al klant? Log in zodat we u beter van dienst kunnen zijn' on the left and a dark purple button with the text 'Aanmelden' on the right. Below this bar are three service tiles. The first tile, 'Uw sector', has a purple background and white text: 'Uw sector', 'Technologische innovatie op maat van de uitdagingen van uw sector', and a white button 'Kies uw sector'. The second tile, 'Hulp nodig?', has a dark purple background and white text: 'Hulp nodig?', 'Vind uw contactpersoon voor administratieve, technische of commerciële vragen', and a dark purple button 'Vind uw contactpersoon'. The third tile, 'Laat u inspireren', has a dark purple background and white text: 'Laat u inspireren', 'Innovatieve getuigenissen van klanten en artikelen van experts', and a dark purple button 'Lees meer'. Each tile includes a partial view of a photograph showing people in a professional setting.
